Quiz 1

True or False:

Tranquility products absorb urine better than other products.

True or False:

It is always best practice to use a larger sized brief on residents because they absorb more.

Quiz 2

True or False:

Incontinence related falls occur when residents feel cold and wet and attempt to toilet themselves.

True or False:

Longer wear times means that I don't have to turn residents as required by facility protocol to prevent pressure ulcers.

Question:

When should a Tranquility product be changed?

A) A bowel movement is present

B) The wetness indicator on the brief is 2-3 fingers from the top on either side

C) A resident requests to be changed

D) All of the above

Quiz 3

Question:

With Tranquility products, how much barrier cream should you use?

A) A large amount of barrier cream

B) Never use barrier cream

C) If required to use it, use a thin layer of barrier cream
