

Tranquility is Here to Help: Managing Incontinence During COVID-19

On behalf of everyone at Tranquility, our hearts go out to all those impacted by COVID-19. This is a stressful time, especially for caregivers who are serving our most-vulnerable population. **Ensuring incontinent patients are in the right product is pivotal to managing caregiver workloads, as well as improving patient outcomes.**

Here's how patients and caregivers can keep safe during this unprecedented time using high-absorbency incontinence products.

31%

of COVID-19 cases¹
are adults ages 65+

45%

of people age 65+
experience incontinence²

Extended wear times and protection from leakage minimizes preventable close contact between patients and caregivers to reduce the spread of illness.

Superior moisture wicking reduces incontinence-related medical issues (such as skin breakdown and UTIs), helping to keep patients out of hospitals and lessen their risk of increased exposure.

Maximum absorbency products keep patients comfortable and dry, leading to a better night's sleep which helps to boost the immune system and overall health.
