

# Tranquility Clinical Trials

Four VA facilities compared Tranquility Products to their current incontinence products and realized great results.

New York VA Facility	Midwest VA Facility	Michigan VA Facility	North Carolina VA Facility
<p>4-week trial resulted in:</p> <ul style="list-style-type: none"><li>• 30% fewer brief changes</li><li>• 40% fewer clothing changes</li><li>• 54% fewer linen changes</li><li>• 60% labor savings</li></ul>	<p>2-week trial resulted in:</p> <ul style="list-style-type: none"><li>• 78% fewer brief changes</li><li>• 91% fewer bed linen/clothing changes</li><li>• Uninterrupted sleep for Veterans</li><li>• Reduction in combative-type behaviors among dementia patients</li><li>• Decreased strain on the staff</li></ul>	<p>2-week trial resulted in:</p> <ul style="list-style-type: none"><li>• 42% fewer brief and underpad changes</li><li>• 48% reduction in gloves and wipes usage</li><li>• Observed improvements in patients' skin health</li></ul>	<p>Tranquility products in combination with DermaTherapy Linens during a trial period resulted in:</p> <ul style="list-style-type: none"><li>• 83% reduction in development of all pressure ulcers</li><li>• 93% reduction in development of stage 1 pressure ulcers</li><li>• 71% reduction in development of stage 2+ pressure ulcers</li></ul>

# Tranquility Clinical Studies

Below are the results of two clinical studies using the Tranquility Products.

Transepidermal Water Loss Study	Uninterrupted Sleep Study
<p>11-day trial period resulted in:</p> <ul style="list-style-type: none"><li>• Reduced wetness 5 to 1 compared to leading national brands</li><li>• Improved skin barrier function</li><li>• Decreased costs associated with moisture related skin breakdown</li><li>• 75% fewer brief changes</li><li>• 83% drier skin</li></ul>	<p>Extended trial resulted in:</p> <ul style="list-style-type: none"><li>• Uninterrupted sleep for residents</li><li>• Reduction in anti-psychotropic drug usage and associated side effects</li><li>• Reduction in transfers to acute care and psychiatric care facilities</li><li>• Decreased anger issues</li><li>• Increased compliance among residents</li></ul> <p>The facility was then able to focus on residents' care and needs.</p>
