

# Infection Prevention and Managing Incontinence

Infection prevention is critical with the upcoming cold and flu season during COVID-19. As incontinent patients need to be isolated or placed in quarantine, it's vital to ensure they are wearing the right absorbent product. Premium incontinence products can help caregivers manage workloads, as well as improve patient outcomes.

Have you considered how premium incontinence products can help with your isolation and quarantine efforts?

1. **Extended wear times and protection from leakage** minimizes preventable close contact between patients and caregivers to reduce the spread of illness.

2. **Superior moisture wicking reduces incontinence-related medical issues** (such as skin breakdown and UTIs), helping to keep patients out of hospitals and lessen their risk of increased exposure.

3. **Maximum absorbency products keep patients comfortable and dry**, leading to a better night's sleep which helps to boost the immune system and overall health.

Select the product style for the best protection:

## Pads

**Light to Moderate Protection**  
Use in regular underwear; moisture-proof backing; adhesive strip

## Pull-on Disposable Underwear

**Moderate to Maximum Protection**  
Worn like regular underwear; easy to pull on and off

## Tape-tab Disposable Briefs

**Moderate to Maximum Protection**  
Accommodates individuals with limited mobility or in need of care assistance

## Underpads

**Moderate to Maximum Protection**  
Thin, soft pad helps protect bedding, furniture, and equipment
