

Michigan VA Facility

INCONTINENCE CARE AND SKIN HEALTH PRODUCT USAGE

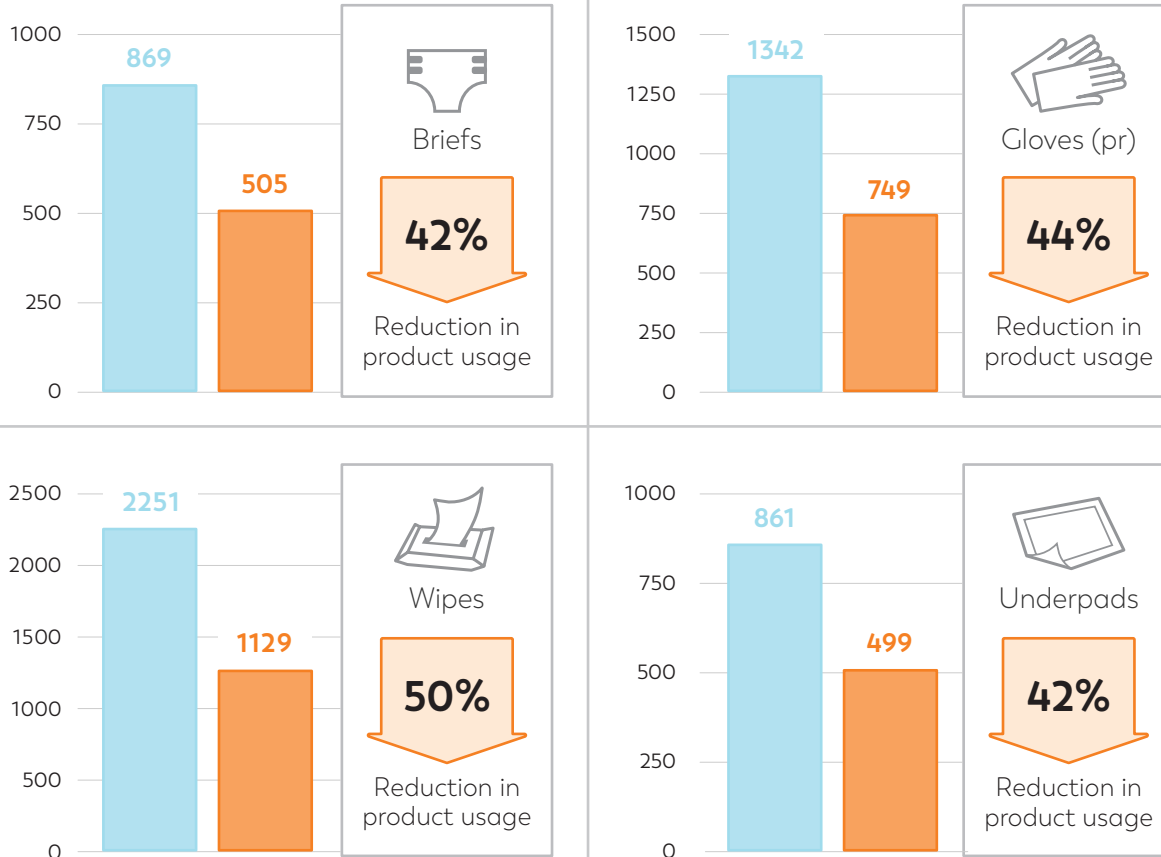

Introduction

A VA facility in Michigan conducted an independent two-week product evaluation for the purpose of capturing evidence that using Tranquility Briefs would reduce* product utilization.

Product Trial Results

Incontinence and Ancillary Product Units Utilized ■ Before **VS.** ■ Tranquility Products

Evaluation Protocol

2-week period

9 Participants

Clinical Comments (Post-Evaluation Period):

In addition to the primary Tranquility product evaluation results, clinicians also reported the following positive observations:

“Participants’ **abdominal rashes are all gone.**”

“**Moist, macerated skin** in the gluteal folds related to moisture from urinary and fecal incontinence **is healing.**”

“**Had yeast**, but since wearing Tranquility, it has **healed up.**”

“Participant had **no rashes** after going to the fair and being home for **6 hours**, and **absolutely loves the Tranquility product.**”
