

In Their Own Words

A North Carolina VA Care Community conducting a product evaluation of Tranquility® Briefs compared to its normally used incontinence product, found that all incontinence-associated dermatitis (diaper dermatitis) cleared within the first two weeks of the study for the group wearing Tranquility products. Here's what else they had to say about Tranquility Products – in their own words.

OUTCOMES

“

“We have seen **significant skin changes** and could not be more pleased.

“We've had **terrific results** using Tranquility Products. We aren't changing our patients as often.”

“Our residents are dry, comfortable and have less diaper dermatitis. ... Your products made **such a favorable impression on the wound nurses** that they would like you to visit again!”

STAFF SATISFACTION

“We love them. **The residents using them absolutely love them** and don't want to give them up.”

“I have done my own demos with the brief, poured lots of warm water in them and ... **they stay dry.** We've seen great results.”

“The Tranquility Briefs **fit a wide range** of residents **of varying sizes.**”

THE BOTTOM LINE

“Tranquility has **taken away the very reasons** I don't like putting briefs onto my patients.”
